*With **2.8** years of hands-on experience as a Software Developer, I have honed my skills in developing robust and scalable software solutions. My journey in the tech industry has equipped me with a deep understanding of various programming languages, frameworks, and methodologies. I have successfully contributed to multiple projects, leveraging my expertise to solve complex problems and deliver high-quality products.*

Experience

Web Developer — Jan 2025 – Present
Red Apple Technology — Kolkata, India

- Collaborated with experienced **cross-disciplinary teams to conceive, design, and deliver innovative products** and services to market, ensuring timely and high-quality releases with **AI integration**.
- Implemented proactive monitoring and rapid resolution strategies for frequent **production** issues, resulting in a **40%** reduction in system downtime and enhanced service reliability.
- Collaborated with the team to prioritize and address urgent production **bugs** while providing technical guidance, which accelerated issue **resolution and reduced** client dissatisfaction and operational disruptions.
- Developed and maintained an **NPM package** using **TypeScript** for **seamless content sharing** across applications, improving frontend workflows and enhancing reusability.
- Automated **error logging** and **email alerts** for **unhandled errors** to ensure that critical issues are immediately brought to attention and managed efficiently, which reduces **downtime and minimizes** impact on users.
- Designed and built **scalable, fault-tolerant** distributed storage, index, and query systems in large computing environments using **Node.js** and database sharding to enhance system performance.
- Built and launched a **gaming platform product** with **100k+ downloads**, ensuring a seamless gaming experience with efficient backend infrastructure, **optimised database management**, and **low-latency API communication**.
- Effectively communicated with **clients** at their location to gather requirements, provide regular project updates, and address client concerns, fostering positive client relationships
- Implemented **database design** in Node.js, significantly enhancing system performance by distributing data across shards. This strategy led to reduced query response times, increased system scalability, and efficient resource utilization.
- Enhanced system efficiency and reliability by streamlining bulk mailing operations in Node.js, reducing **processing overhead** and minimizing delivery delays for both **message and email** services through external APIs.
- Oversaw Node.js **production version upgrades**, mitigating challenges related to codebase adjustments and third-party library up- dates to maintain system stability and enhance functionality.
- Optimized legacy storage and search query for the high-volume external web application, minimizing the average **response time by 63% by database replication.**
- Designed and implemented **RESTful APIs** and **Postgres** in **Node.js**, integrating with **MongoDB** and **SQL** databases to enable efficient and scalable communication between client applications and servers.
- Collaborated with front-end team using **React.js** and **Next.js** to ensure efficient **integration of API endpoints**, optimizing data fetching, server-side rendering (SSR), and enhancing **frontend performance**.

Jr. Software Engineer — Nov 2022 – Dec 2024
Dataevole Solution Pvt Ltd. — Hyderabad, India

- Collaborated with the **backend team** on the **movie booking system** using the **Node And Express.js**, implementing **JWT authentication, seat selection, and Razorpay payment gateway**.
- Used **GitHub** for version control, managing **pull requests, code merges, and CI/CD integration**, ensuring smooth development and deployment workflows.
- **Optimized legacy storage architecture and high-volume search queries**, reducing average response time by **63%**

Skills

- **Languages & Frameworks:** Node.js . Ecmascript . TypeScript . JavaScript (ES6+) . HTML5 . CSS3 . Styled Components . Socket.IO . React.js . Express.js . MongoDB . Mongoose . MySQL . Redux . Context API . JWT . OAuth 2.0 . Passport.js . Firebase Authentication
- **Tools & Technologies:** Git . GitHub . Postman . Axios . React Router . React Query . ESLint . Webpack . PM2 . Amazon CloudFront . AWS S3 . EC2 . Docker . Kubernatets . Terraform . GCP . Data Structure . PostgreSQL . Redis . Bcrypt . Google Analytics . Google Ads . RESTful APIs . API Authentication (JWT . OAuth) . Jenkins . Scrum . Sprint Planning . Jira . Daily Standups . Node mailer . Microservise . Rabbit Mq
- **Certifications:**
  SDET Automation Testing, Spider, Bangalore
  Node.js React.js Spire Technology

Projects

DS AI

Document Search AI is a product that enables companies to search and query their documents by linking their data sources within the DS AI application.

- Integrated **Amazon Kendra**, a powerful **search** and **indexing** service, to enable document querying, which enhanced user experience by providing accurate, contextually relevant answers from the documents.
- Integrated **LangChain** to create a **RetrievalQAChain** with the **Bedrock model** and **Kendra Retriever**, enabling intelligent query processing and context-aware answers, which enhanced the accuracy and relevance of responses and significantly improved user experience.

- Implemented a company-wise **metadata hierarchy** to restrict document **access based on user company affiliation**, ensuring that users can only query documents available in their respective company data sources, which improved data **security, enhancing privacy and accuracy** in document retrieval .
- Implemented **text-to-speech (TTS)** and **speech-to-text (STT)** functionalities in the frontend, which reducing the **time and effort** needed to retrieve information and making the system more accessible.

Casino Gaming

*A scalable, cross-platform **B2C casino gaming platform** built with **Node.js**, enabling users to play casino games (**slots, poker, blackjack, roulette**) with bots or challenge friends via unique game links. The platform allows businesses to upload, monetize, and promote games through ads, subscriptions, and in-app purchases.*

- Built a secure user **account** and **wallet system**, managing virtual currency balance, **bets, wins, and losses** with proper **transaction handling** to avoid inconsistencies. Implemented server-side validation for all games.
- Implemented **JWT-based secure authentication** and **role-based access control** (RBAC) for players**, admins,** and business partners.
- Integrated **third-party game provider** to manage and deliver **casino games**, ensuring reliable gameplay, fair outcomes, and scalable content update. The system handles game sessions**, player transactions**, and **real-time** score updates **through provider APIs**.
- **Game Recommendation System:** Stored **game metadata** and **user interactions in a database**, generating **personalized recommendations** using **content-based filtering** and **user behaviour analysis**, enhancing **engagement and retention**.
- **Scalable API Development:** Designed and developed **70+ RESTful APIs** using **Node.js and Express.js**, enabling **secure authentication, data management, and real-time interactions** for the platform.
- **Scalable Cloud Storage & Deployment:** Implemented **AWS S3 with versioning** for **secure storage, seamless deployments, and easy rollback management**.

MESH APP

A doctor-consultation application with an admin panel, allows MRs to consult with doctors and view doctor availability for scheduling meetings.

- Integrated **Rezorpay** payment **gateway** with dynamic key retrieval to ensure secure transactions, accurate payment records, and improved financial tracking.
- Designed and implemented a structured database schema to efficiently manage doctor schedules, MR **appointments**, and **administrative workflows**, **significantly reducing** manual effort in scheduling and coordination
- Completed integration for automated **Google Meet link generation**, enhancing functionality for scheduling and managing virtual meetings seamlessly.
- Implemented **Firebase Cloud Messaging** (FCM) to handle real-time in-app notifications for key events such as meeting **acceptance/rejection** and **payment confirmations**, improving user experience and operational efficiency.
- **Cloud & CI/CD Deployment:** Deployed on ***AWS EC2*** for ***scalable cloud hosting***, containerized services using ***Docker*** for ***orchestration***, and automated build & deployment with ***Jenkins CI/CD***, ensuring ***high availability, fault tolerance, and seamless updates***.

Human Resource Management System (HRMS)

HRMS is an **employee management application** designed to **streamline and automate various HR functions**. It offers comprehensive features for **managing employee details, tracking attendance, and handling leave requests**.

- **Automated Face Recognition:** Implemented **Azure Face API** for **automated face scanning** during **login and logout**, enabling **smooth and accurate attendance tracking** through **image-based recognition**.
- **Automated Announcements:** Developed a **cron job** using **WhatsApp API** to **automate personalized announcements** for **work anniversaries and birthdays**, integrating with **HRMS and WhatsAppRGT** for seamless notifications.
- **Scalable API Development:** Created **RESTful APIs** using **Node.js** with **MySQL** for **secure data management and processing**.
- **Cloud Storage Services:** Developed **asynchronous services** in **Node.js** for **AWS S3 Bucket operations**, ensuring **secure file storage and retrieval**.

EDUCATION

- **Bachelor of Commerce**
  Utkal University**, Odisha** **2017 - 2020**
  CGPA: **6.26**
- **Intermediate in Commerce**
  Higher Secondary Education**, Odisha** **2015 - 2017**
