Dipti Ranjan Behera

+91 9777740059 | ranjan46013@gmail.com

With 3.2 years of hands-on experience as a software engineer, I have honed my skills in developing robust and scalable software solutions. My journey in the tech industry has equipped me with a deep understanding of various programming languages, frameworks, and methodologies. I have successfully contributed to multiple projects, leveraging my expertise to solve complex problems and deliver high-quality products.

Experience

FEB 2023 - Continue

Pythus info pvt ltd , *Software Engineer* | Hyderabad

- Implemented proactive monitoring and rapid resolution strategies for frequent **production** issues, resulting in a **40%** reduction in system downtime and enhanced service reliability.
- Collaborated with the team manager to prioritize and address urgent production bugs while providing technical guidance, which accelerated issue **resolution and reduced** client dissatisfaction and operational disruptions.
- Managed **frontend** and **backend** teams by assigning tasks, monitoring progress, and adjusting resources as needed to meet project milestones, which improved efficiency, timely delivery, and optimized resource utilization by **20%**.
- Implemented a **Continuous Integration and Continuous Deployment (CI/CD)** pipeline for both development and production environments, automating the deployment process and ensuring consistent and reliable releases.
- Automated **error logging** and **email alerts** for **unhandled errors** to ensure that critical issues are immediately brought to attention and managed efficiently,which reduces **downtime and minimizes** impact on users.
- Effectively communicated with **clients** at their location to gather requirements, provide regular project updates, and address client concerns, fostering positive client relationships.
- Successfully completed and delivered projects over the year using **Node.js** with each project deployed on **Amazon EC2** instances.
- Implemented **database sharding** in Node.js, significantly enhancing system performance by distributing data across shards.This strategy led to reduced query response times, increased system scalability,and efficient resource utilization.
- Enhanced system efficiency and reliability by streamlining bulk mailing operations in Node.js, reducing **processing overhead** and minimizing delivery delays for both **message and email** services through external APIs.
- Oversaw Node.js **production version upgrades**, mitigating challenges related to codebase adjustments and third-party library up- dates to maintain system stability and enhance functionality.
- Optimized legacy storage and search query for the high volume external web application, minimizing the average response time by **63%** by **database replication**.
- Prevented, identified, and resolved **major anomalies** that eased company processes Contributed to the continual im- provement of the design and development process,maintaining strong aspects while researching and providing recommendations for areas of improvement.
- Gathered and analyzed technical application requirements, increasing overall efficiency by **17%**.
- Designed and implemented **RESTful APIs** in **Node.js**, facilitating communication between client applications and servers.
- Collaborated with front-end developers to ensure efficient integration of **API endpoints**.

Education

7.4/10 **Bachelor of computer Application.** From *Fakir Mohan University, Balasore* |Odsiha *2018-21*

5.4/10 **Higher Secondary Education** Ramarani *College of sc and Tech* | Odisha *2016-18*

Skills

Programming: Javascript, Typescript(1+yr), Python ,Java,Node.js ,PHP, Express, MySQL, MongoDB, GraphQL, HTML, CSS, React **Tools** AWS,Git,GitHub,GitHub Actions,Ngnix, SourceTree, Postman,JIRA,Developer Tools, VS Code,Linux,ORM Kafka,Redis,Docker,UnitTesting,Firebase

Projects

DS AI **TECH STACK || Nodejs + Typescript +Mongodb + AWS+ Docker+Redis+Rabitmq**

Document Search AI is a product that enables companies to search and query their documents by linking their data sources within the DS AI application.

• Integrated **Amazon Kendra**, a powerful **search** and **indexing** service, to enable document querying,which enhanced user experi- ence by providing accurate, contextually relevant answers from the documents.

• Integrated **LangChain** to create a **RetrievalQAChain** with the **Bedrock model** and **Kendra Retriever**, enabling intelligent query processing and context-aware answers,which enhanced the accuracy and relevance of responses and significantly improving user experience.

• Implemented a company-wise **metadata hierarchy** to restrict document **access based on user company affiliation**, ensuring that users can only query documents available in their respective company data sources,which improved data **security,enhancing privacy and accuracy** in document retrieval.

• Implemented **text-to-speech (TTS)** and speech- **to-text (STT)** functionalities in the frontend,which reducing the **time and Effort** needed to retrieve to information and making the system more accessible.

TrendTrax **TECH STACK || Nodejs + Typescript +Psotgress + AWS+ Docker+kafka**

Developed a **SaaS** platform allowing clients to manage digital marketing campaigns and get comprehensive insights and analytics for campaigns .

• Implemented **Google Analytics 4 (GA4)** and **Google Ads** API to retrieve and analyze detailed insights and performance data which enhanced ability to track and measure campaign effectiveness.

• Created an API as **third- party services** to integrate with clients' websites, providing direct traffic details and insights, which enables clients to gain valuable insights into their website traffic and user behavior, optimizing their marketing strategies.

• Implemented **push notifications** to keep users informed about important updates, such as support ticket statuses or campaign performance.

• Implemented **Redis caching** to store and quickly retrieve **GA4 data** for specific date ranges, reducing the need for repeated, time- consuming queries to the GA4 API.

MESH APP **TECH STACK || Nodejs + Javacript +Mongodb + AWS+ Docker +firebase**

A doctor-consultation application with an admin panel, allows MRs to consult with doctors and view doctor availability for scheduling meetings.

• Implemented **Razorpay payment** integration and dynamic retrieval of Razorpay keys,which Ensured **accurate payment** records and improved **financial tracking**.

• Designed a structured **database** schema to manage doctor schedules, MR appointments, and administrative tasks efficiently and reduced manual effort in managing schedules and appointments.

• Completed integration for creating **Google Meet links**,which enhanced functionality for **scheduling and managing** meetings through Google Meet.

• Implemented **Firebase** to handle in-app **notifications** for all significant events, including meeting acceptance/rejection and pay- ment confirmations which improves overall **user experience and operational efficiency.**

Human Resource Management System

TECH STACK || Nodejs + Javascript+Mongodb + AWS+ Docker +kafka+redis

HRMS is an employee management application designed to streamline and automate various HR functions. It offers comprehensive features for managing employee details, tracking attendance, and handling leave requests

• Implemented **Azure Face API** for automated face scanning during login and logout, enabling smooth and accurate attendance track- ing through image-based recognition.

• Implemented a **cron job** to automatically generate and send announcements for work anniversaries and birthdays.

• Implemented a **Leave Management System (LMS)** to streamline the process for employees to apply for and manage their **leave requests**.

• Created **RESTful AP**I in Node.js with combination of **MySQL**.

• **Collaborated** with front- end developers on the integration of element.

• Wrote **AWS S3** Bucket operation **async** Services with **Node.js**

Certification

SDET Automation Testing, Qspider, banglore

Nodejs Backend development SpireTechnology
